Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/741,856

Applicant(s)

MODELSKI ET AL.

Examiner

Michael J. Moore, Jr.

Art Unit

2666

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 July 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-39 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-39 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 22 December 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/20/2005 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims **1-3, 8-16, 21-29, and 34-39** are rejected under 35 U.S.C. 102(e) as being anticipated by Albert et al. (U.S. 6,650,641) ("Albert"). Albert teaches all of the limitations of the specified claims with the reasoning that follows.

Regarding claim 1, "a method for performing a plurality of filter operations on a data packet using an instruction" is anticipated by the method shown in Figure 13.

"Receiving an instruction to filter at least one data packet" is anticipated by a forwarding agent receiving fixed affinities (instruction) from a service manager that specify actions

to be performed on particular packets as spoken of on column 13, lines 19-29.

“Retrieving a filter result based on the received instruction” is anticipated by step 1304 of Figure 13 where a forwarding agent finds an affinity that matches (filter result) an incoming packet as spoken of on column 29, lines 59-61. Lastly, “performing at least two of a plurality of filter operations on the at least one data packet in accordance with the retrieved filter result” is anticipated by the source/destination IP address change, source/destination port change, and checksum adjustment actions (filter operations) shown in steps 1310, 1312, 1314, 1316, and 1318 of Figure 13 that are performed in response to the affinity/packet matching (filter result) step 1304 as spoken of on column 30, lines 1-12.

Regarding claims **2, 15, and 28**, “processing the at least one data packet based on a determination of the performed filter operations” is anticipated by the forwarding (processing) of the packet in step 1320 of Figure 13 in response to the actions 1310, 1312, 1314, 1316, and 1318.

Regarding claims **3, 16, and 29**, “wherein the instruction comprises a set of data bits” is anticipated by fixed affinity 600 shown in Figure 6 composed of key, flag, and address fields (data bits).

Regarding claims **8, 21, and 34**, “wherein the processing of the data packet comprises classifying the data packet” is anticipated by the forwarding (processing) of the packet in step 1320 of Figure 13 in response to the actions 1310, 1312, 1314, 1316, and 1318.

Regarding claims **9, 22, and 35**, “wherein the data packet comprises one of SONET, ATM, Ethernet, HDLC, PPP, IP, TCP, and UDP data packet” is anticipated by IP packet 980 shown in Figure 9E.

Regarding claims **10, 23, and 36**, “wherein the at least one data packet comprises a plurality of data fields” is anticipated by IP packet 980 shown in Figure 9E containing fields 982 and 984.

Regarding claims **11, 24, and 37**, “performing the filter operations on at least one of the data fields of the at least one data packet” is anticipated by the source/destination IP address change, source/destination port change, and checksum adjustment actions (filter operations) shown in steps 1310, 1312, 1314, 1316, and 1318 of Figure 13.

Regarding claims **12, 25, and 38**, “wherein the filter operations correspond to the data bits of the instruction” is anticipated by step 1304 of Figure 13 where a forwarding agent finds an affinity that matches (filter result) an incoming packet as spoken of on column 29, lines 59-61.

Regarding claims **13, 26, and 39**, “wherein the retrieving the filter result based on the received instruction comprises a radix search” is anticipated by step 1304 of Figure 13 where a forwarding agent finds (search) an affinity that matches (filter result) an incoming packet as spoken of on column 29, lines 59-61.

Regarding claim **14**, “an apparatus for performing a plurality of filter operations on a data packet using an instruction” is anticipated by the forwarding agent 250 shown in Figure 2B. “A memory configured to store a filter result, the filter result being received from the memory based on an instruction, the instruction being configured to

Art Unit: 2666

filter at least one data packet” is anticipated by a forwarding agent 250 containing memory 254 (See Figure 2B) that receives fixed affinities (instruction) from a service manager that specify actions to be performed on particular packets as spoken of on column 13, lines 19-29, as well as step 1304 of Figure 13 where a forwarding agent finds an affinity that matches (filter result) an incoming packet as spoken of on column 29, lines 59-61. Lastly, “a processor coupled to the memory, the processor configured to perform at least two of a plurality of filter operations on the at least one data packet in accordance with the filter result” is anticipated by forwarding agent 250 containing processor 252 coupled to memory 254 (See Figure 2B) that performs source/destination IP address change, source/destination port change, and checksum adjustment actions (filter operations) shown in steps 1310, 1312, 1314, 1316, and 1318 of Figure 13 in response to the affinity/packet matching (filter result) step 1304 as spoken of on column 30, lines 1-12.

Regarding claim 27, “a computer-readable medium encoded with a program for a computer” is anticipated by the method shown in Figure 13 performed by a forwarding agent 250 of Figure 2B containing memory 254 (computer readable medium).

“Receiving an instruction to filter at least one data packet” is anticipated by a forwarding agent receiving fixed affinities (instruction) from a service manager that specify actions to be performed on particular packets as spoken of on column 13, lines 19-29.

“Retrieving a filter result based on the received instruction” is anticipated by step 1304 of Figure 13 where a forwarding agent finds an affinity that matches (filter result) an incoming packet as spoken of on column 29, lines 59-61. Lastly, “performing at least

Art Unit: 2666

two of a plurality of filter operations on the at least one data packet in accordance with the retrieved filter result" is anticipated by the source/destination IP address change, source/destination port change, and checksum adjustment actions (filter operations) shown in steps 1310, 1312, 1314, 1316, and 1318 of Figure 13 that are performed in response to the affinity/packet matching (filter result) step 1304 as spoken of on column 30, lines 1-12.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims **4-7, 17-20, and 30-33** are rejected under 35 U.S.C. 103(a) as being unpatentable over Albert et al. (U.S. 6,650,641) ("Albert").

Regarding claims **4, 17, and 30**, Albert teaches fixed affinity 600 shown in Figure 6 composed of key, flag, and address fields (data bits). Albert does not explicitly teach a 32-bit instruction. However, at the time of the invention, it would have been obvious to one skilled in the art to use a fixed affinity 600 of Albert that contains 32 bits in order to provide a robust method of matching an affinity with an incoming packet and performing corresponding actions on the packet as spoken of on column 30, lines 1-12.

Regarding claims **5, 18, and 31**, Albert teaches source/destination IP address change, source/destination port change, and checksum adjustment actions (filter operations) shown in steps 1310, 1312, 1314, 1316, and 1318 of Figure 13 that are performed in response to the affinity/packet matching (filter result) step 1304 as spoken of on column 30, lines 1-12. Albert does not explicitly teach 32 filter operations. However, at the time of the invention, it would have been obvious to one skilled in the art to perform more filter operations than shown in Figure 13 of Albert in order to provide a more robust packet filtering process.

Regarding claims **6, 19, and 32**, Albert teaches fixed affinity 600 shown in Figure 6 composed of key, flag, and address fields (data bits). Albert does not explicitly teach a 64-bit instruction. However, at the time of the invention, it would have been obvious to one skilled in the art to use a fixed affinity 600 of Albert that contains 64 bits in order to provide a robust method of matching an affinity with an incoming packet and performing corresponding actions on the packet as spoken of on column 30, lines 1-12.

Regarding claims **7, 20, and 33**, Albert teaches source/destination IP address change, source/destination port change, and checksum adjustment actions (filter

operations) shown in steps 1310, 1312, 1314, 1316, and 1318 of Figure 13 that are performed in response to the affinity/packet matching (filter result) step 1304 as spoken of on column 30, lines 1-12. Albert does not explicitly teach 64 filter operations.

However, at the time of the invention, it would have been obvious to one skilled in the art to perform more filter operations than shown in Figure 13 of Albert in order to provide a more robust packet filtering process.

Response to Arguments

7. Applicant's arguments with respect to amended claims **1-39** have been considered but are moot in view of the new ground(s) of rejection provided above.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lakshman et al. (U.S. 6,341,130), Narad et al. (U.S. 6,157,955), and Bellenger (U.S. 5,802,054) are other references pertinent to this application.

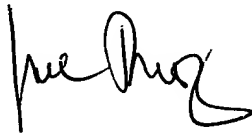

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael J. Moore, Jr. whose telephone number is (571) 272-3168. The examiner can normally be reached on Monday-Friday (8:30am - 5:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Seema S. Rao can be reached at (571) 272-3174. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
